## SUMMARY

Software engineer with 4.5 years of production experience at Accenture and TCS across Bank of America, General Electric, Ross Stores and AT&T, now applying that same engineering discipline to applied AI. Currently an AI Developer at Baltic Agent Systems, building an AI-assisted dispatch and routing backend, alongside an M.Sc. in Computer Science at Universität Rostock focused on AI, distributed systems and cloud computing.

## EXPERIENCE

### AI Developer (Werkstudent)

Baltic Agent Systems UG

Aug 2026 – Present

Rostock, Germany (Remote)

- Building an AI-assisted dispatch backend for a taxi/booking platform: OpenStreetMap-based route calculation, fare computation per official regional tariff regulation, and driver/vehicle availability scheduling with conflict checks to prevent double-booking.
- Stack: Python, FastAPI, PostgreSQL/PostGIS.

### M.Sc. Research Project — AlphaFold Web Platform

Universität Rostock

Oct 2025 – Present

Rostock, Germany

- Owned end-to-end the User Management module of a web-based AlphaFold bioinformatics platform — PostgreSQL schema, Flask backend, frontend UI — shipping authentication, role-based access control, bcrypt-hashed credentials, account lockout with auto-recovery, and a full admin lifecycle suite.
- Built a real-time user-statistics dashboard and an in-platform admin-user messaging feature, removing dependency on external tools.

### Data Analyst

Tata Consultancy Services

Feb 2025 – Sep 2025

Bengaluru, India

- Engineered SQL-based data transformation pipelines via Microsoft Graph API, processing usage telemetry across 10,000+ users feeding executive Power BI dashboards.
- Delivered multi-dimensional analytics (temporal, geographic, seasonal), identifying 20%+ seasonal usage spikes that informed leadership decisions.

### Application Development Analyst / Associate

Accenture Solutions Pvt Ltd

Dec 2020 – Feb 2025

Bengaluru, India

#### Bank of America — Self-Service SPA

- Architected a modular Angular SPA with a reusable component library and Jenkins CI/CD, improving task-completion flow by 4% on a high-security banking platform.
- Integrated Glassbox session analytics with JWT-based authentication, boosting fraud-detection accuracy by 12%.

Ross Stores — Micro Frontend Platform

- Built a Micro Frontend architecture (Angular/TypeScript/REST/MongoDB/MySQL) enabling five teams to ship independently.
- Achieved 75% Jest test coverage; overhauled CI/CD (Jenkins, JIRA), cutting release cycle time by ~30%.

General Electric — Monitoring & Diagnostics

- Built an Angular 13 SPA handling high-volume diagnostic streams, with lazy loading (+10% faster load) and virtual scrolling (−9% memory).
- Hardened security with HTTP interceptors, input sanitisation and JWT-based RBAC.

AT&T — FirstNet Broadband Platform

- Optimised a mission-critical Angular SPA via AOT compilation and code splitting (+10% performance, +15% engagement).
- Contributed to architecture and code reviews within cross-functional Agile squads.

## SELECTED PROJECTS

---

### YouTube Transcript Summariser

*Python, NLTK, Hugging Face Transformers, Streamlit, Google Gemini Pro*

- Built a transcript summarisation tool combining extractive methods (TextRank, Luhn) with abstractive models (BART, T5, Pegasus, Gemini Pro), with a Streamlit interface on top of NLTK and Hugging Face Transformers.
- Added video recommendations and automatic quiz generation from the summarised content.

### Folk Tune Generator — TunesFormer + Constrained Decoding

*PyTorch, Hugging Face, music21*

- Upgraded from a fine-tuned GPT-2 baseline to TunesFormer, a Transformer pre-trained on ABC-notation folk tunes with structured control codes (tune type, meter, key).
- Implemented a custom logits processor constraining decoding to valid ABC-notation tokens, generating reels, jigs, waltzes and hornpipes on demand.

### Air Quality Analysis — Germany, 2023

*PySpark, HDFS, Plotly, Prophet, Pandas*

- Ran a distributed ETL pipeline on a 4-node HDFS cluster over 2.8M+ sensor readings, with IQR-based outlier detection, spatial hotspot mapping, and a 30-day PM2.5 forecast using Prophet; found 78% of sensor locations exceeded WHO limits.

## EDUCATION

---

### M.Sc. Computer Science (International)

Oct 2025 – Present

*Universität Rostock, Germany*

- Focus: AI, Distributed Systems, and Cloud Computing.

### B.E. Electronics & Instrumentation Engineering

Aug 2016 – Sep 2020

*JSS Science and Technology University, India*

CGPA 8.69/10

## TECHNICAL SKILLS

|                    |                                                                                                    |
|--------------------|----------------------------------------------------------------------------------------------------|
| Languages          | Python, TypeScript, JavaScript, SQL, HTML5, CSS3, Java                                             |
| Frameworks & APIs  | Angular, FastAPI, Flask, Spring Boot, Django, REST APIs, Micro Frontends                           |
| AI / ML            | Retrieval-Augmented Generation, PyTorch, Hugging Face Transformers, sentence-transformers, PySpark |
| Data               | PostgreSQL, PostGIS, MongoDB, MySQL, SQLite, Power BI, Databricks, Microsoft Graph API             |
| DevOps & Tooling   | Git, CI/CD, Jenkins, Docker, Postman, SonarQube, JIRA                                              |
| Testing & Security | Jest, TDD/BDD, Code Reviews, JWT/RBAC, HTTP Interceptors, Input Sanitisation                       |

## AWARDS

---

### All-Star Award (Go-Getter Award) — Accenture Solutions Pvt Ltd, Aug 2024

Recognised for outstanding contributions to the Address Connect project.

### Kudos Award — Accenture Solutions Pvt Ltd, Sep 2024

Recognised for leading initial analysis and supporting tool development during a major product release.
